

Amendments to the Specification:

Please replace paragraph [0062] on page 48 with the following paragraph:

In the present example, compound A ((+)-(2*R*,3*R*)-1-dimethylamino-3-(3-methoxy-phenyl)-2-methyl-pentan-3-ol; hydrochloride) in the dosage of 0.1 mg/kg intravenous was combined with compound B (oxybutynin) in the dosage of 0.03 mg/kg intravenous and the action of this combination was compared with that of the individual substances. The individual substances and combination showed an inhibition of the rate of contractions (micturition events/min). The data are summarized in the following table.

Substance	Compound A 0.1 mg/kg i.v.	Compound B 0.03 mg/kg i.v	Compound A 0.1 mg/kg i.v. + compound B 0.3 <u>0.03</u> mg/kg i.v.	Vehicle control i.v.
Inhibition of the rate of contractions compared with the pretest [% MPE]	21.7%	10.7%	42.5%	4.0%
